

On April 3, if the Patient Height, Dosing Weight, and Allergies are not updated on the date of the visit the Height/Weight/Allergy Rule causes an alert to fire to the MA and CMA when closing the patient chart. This alert will specify what information is missing.

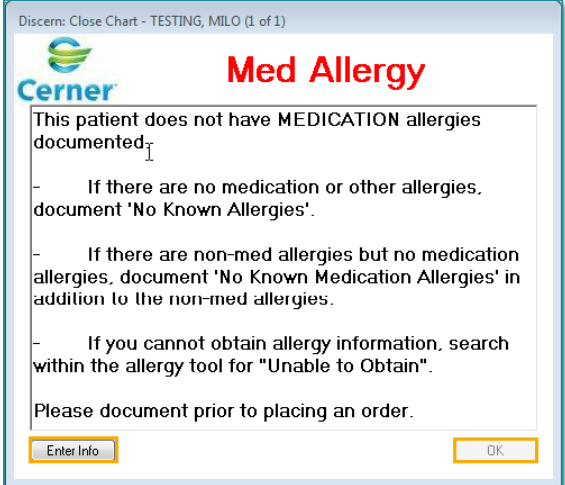

When the Height/Weight/Allergy Rule window opens, please follow the instructions below:

STEP 1: Click **Enter Info** to open the Height/Weight/Allergies PowerForm

- Be sure that all the three Height/Weight/Allergies data are charted.

STEP 2: Click the green checkmark  to sign.

STEP 3: Click the OK button in the  pop-up window to return to patient chart.

NOTE: If you cannot obtain allergy information, search with in the allergy tool for “unable to obtain” and select the category as “drug” to satisfy the alert. If you choose any other category, the alert will continue to fire, and clinical staff will be prompted again.
