

When reviewing or processing pending PTO and R-shift tasks in Clairvia Web, it may be helpful to set a filter. If more than one profile is managed, each will need to have a filter established.

## Creating Filters for PTO/R Shift Requests

- STEP 1:** In the **Schedule** drop down from the Clairvia Web toolbar, select **Administer Requests**.
- STEP 2:** Click **Setup** in the upper-right corner of the page.
- STEP 3:** Click **Add** in the upper-left and **Name** the filter accordingly.
- STEP 4:** **Profiles Tab** – Check the appropriate profile you are building the filter for, and then click **Add>>**.
- STEP 5:** **Tasks Tab** – In the drop-down, pick your profile, select the appropriate Tasks, and then click **Add>>**.
- STEP 6:** **Employees Tab** – Check the box in front of profile name, then click **Add>>**.
- STEP 7:** Once complete, click **Save**, then **Select**.
- When selecting a filter, that filter will persist when logging out of Clairvia Web and will still be visible when logging back in. Please change the filter drop-down in the upper-right corner to **(none)** when done using that filter.

**NOTE:** When new tasks are created related to PTO/R-Shifts or for new hires or transfers, the Tasks and/or Employees tab will need to be updated, so the filter will display the new task or employee.
