

The IV Drips section is located within the IV Infusions iView band. This will allow Nursing staff to document titrations of IV medications within iView.

Initial Documentation

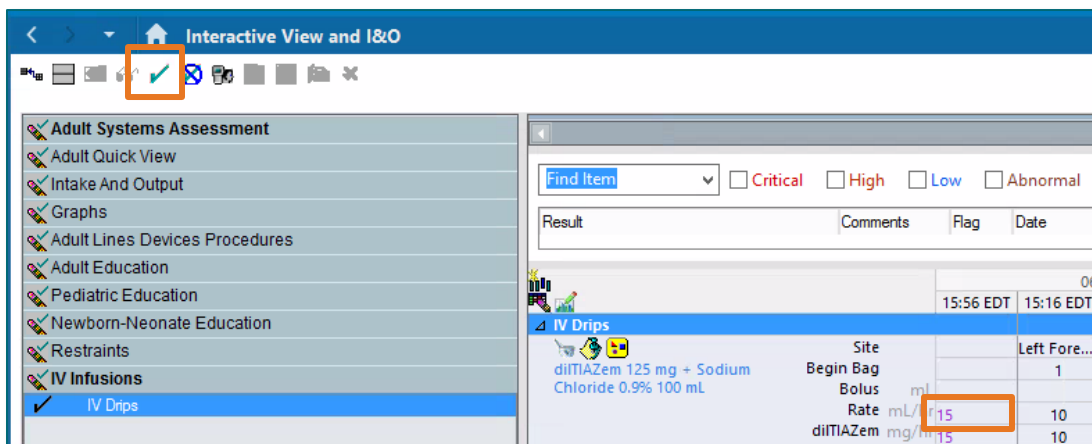

Each bag that is hung must initially be documented via the Medication Administration Wizard with barcode scanning. Once the initial documentation is complete, any subsequent titrations may be documented within iView in the IV Drips section of the IV Infusions band.

STEP 1: Within iView, find the medication to be titrated in the IV Drips section of the IV infusions band.

STEP 2: Select the appropriate medication from the list and double-click the box to the right of Rate.

STEP 3: Enter the new titrated value.

STEP 4: Click the green arrow in the upper left to sign.
