

MyExperience is used by nurses who float between departments, such as the ED and specialty Inpatient areas, to change their Cerner position to have the correct electronic viewpoint and documentation.

Finding the MyExperience Tool

The MyExperience tool is located in the same toolbar as the CareCompass button.

If you do not see the MyExperience button on the tool bar, it may appear in the drop down of the tool bar containing the CareCompass button.

Using MyExperience

My Available Positions: Use to select your position based on your role.

My Default Organizer View: Use to select the desired view seen when signing into PowerChart.

STEP 1: Select MyExperience from the toolbar.

STEP 2: Select the department you're working in from the My Available Positions list.

- Nurse p1 position is used for inpatient nursing, which would include Med/Surg and Pediatric nursing units.

STEP 3: Change the default view within the My Default Organizer View list as needed.

STEP 4: Click Save to apply any changes made.

STEP 5: Log out and sign back in when prompted. If changing to the Nurse ED p1 position, be sure to log into FirstNet for the correct view.

NOTE: To ensure the changes are saved for the next PowerChart session, close out of PowerChart using the Exit button.  When PowerChart is reopened, the selected view and/or MPage will default open.
