

The following workflow will serve as a guide to complete the EKG process within FirstNet LaunchPoint.

EKG Workflow for ED Nursing and ED Nurse Techs

➤ When an EKG is ordered, the EKG will populate to the order column. It will complete only when uploaded as it does today.

➤ The order will cause the **Throughput** column on the left to turn pink and the **Status** column to say EKG.

➤ This is the trigger to all staff that an EKG has been ordered.

➤ When the EKG has been completed by the ED Nurse/ED Tech, complete the following process:

- Right-click within the patient row.
- Hover over Complete Event.
- Select EKG.

Completing the EKG Activity

➤ The ED Nurse/ED Tech will complete the activity from the nurse activity column.

- Single-click in the nurse activities column.
- Select the EKG Patient Care order.
- Click Document.
- Document the date and time the EKG was completed.

➤ The throughput color and the EKG activity will fall off the board.

NOTE: The EKG will override what the throughput status was prior to the order being placed. As soon as the event and the task are marked complete, the Status will return to what it was (i.e., inpatient bed request, eval in progress, etc.)
