

For patient safety, it is extremely important an accurate dosing weight is documented before any orders are placed on the patient. An accurate dosing weight ensures when a patient is admitted, a task will fire to CareCompass. The task links to the Height/Dosing Weight form and must be completed prior to any orders being placed.

## Documenting Dosing Weight

**STEP 1:** From CareCompass, click the task that opens the Height/Dosing Weight form.

**STEP 2:** Complete the form and click the **green checkmark** in the upper left corner to sign.

**NOTE:** If the task is completed and not done in CareCompass, be sure to return to CareCompass to complete the task.

## Updating Dosing Weight

The Dosing Weight should be updated every 30 days and when ordered by a Provider.

When an update to the Dosing Weight is needed, the form is accessed via AdHoc in the toolbar.

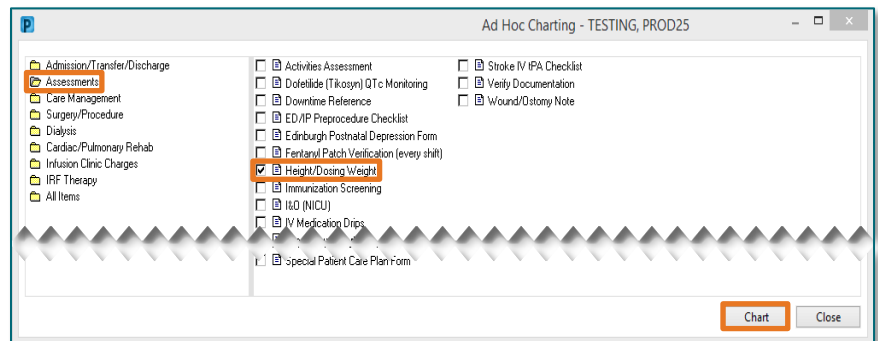

**STEP 1:** Click AdHoc.

**STEP 2:** Select Assessments.

**STEP 3:** Select Height/Dosing Weight checkbox.

**STEP 4:** Click Chart.

**NOTE:** The Height/Dosing Weight form can also be accessed from the Admissions MPage in the Admission Documentation component drop down.
