

PowerChart Maternity is a solution that connects ambulatory and inpatient settings. The sharing of information between the two venues will improve the continuity of care provided throughout the mother's pregnancy. Additionally, all members of the healthcare team have access to information necessary for delivering high-quality care to the newborn.

Interactive View and I & O

There are multiple bands/sections within Interactive View and I&O that may be utilized in NICU, this is not inclusive of all sections of documentation that are available.

➤ NICU Quick View

- Bridge Breast Milk
 - Documentation from Bridge Breast Milk Management will display in this band.
 - Information does not flow from Cerner to Bridge.

➤ Newborn Copied Results

- This band will contain information that was copied to the newborn chart from the maternal chart via Results Copy.
- To view the information the first time, click the name of the section.

- Sections include:

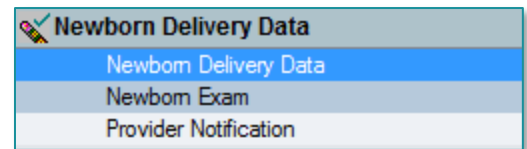

- Maternal Information Copied Data
- Maternal Delivery Info Copied Data
- Maternal Lab Results Copied Data
- Newborn Delivery Data Copied Data
- Initial Newborn Exam Copied Data
- Maternal Education Copied Data

- An initial result copy will occur by the labor nurse shortly after delivery and will occur several times during the mother’s hospital stay.
- If a black checkmark is in front of the section, there is information in that section.

➤ **Newborn Delivery Data**

- This band contains information related to the delivery of the newborn.
- Sections in this band include:
 - Newborn Delivery Data
 - Newborn Exam
 - Provider Notification

➤ **Adding Bands to View**

- With iView open, select **View** from the top toolbar.
- Select **Layout – Navigator Bands**.
- Find the desired band and highlight the band name.
- Move the band name from the left to the right and select **OK**.
- The order of the bands can be adjusted by using the up and down arrows to have them display in the order you prefer.
- Close out of the patient chart and reopen the chart to see the changes.
