

Below are a few common questions that have been asked since the Venous Thromboembolism (VTE) prevention solution went live.

Therapy Ordered/Selected Does Not Match Recommendation

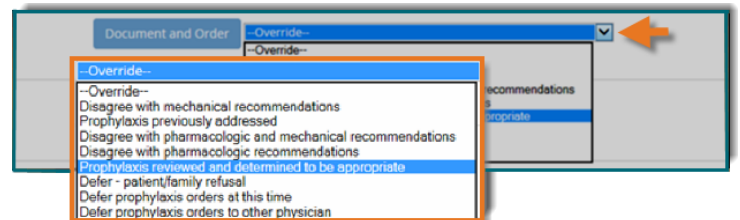

If current regimen order does not match the recommendation,

- **Example: Alteplase for cath clearance**
 - The advisor will display a red icon with exclamation.

- **An override reason will need to be selected to document and order prophylaxis.**

- The option 'Prophylaxis reviewed and determined to be appropriate' could be used in this case.
- Reminder to select Document versus Cancel so the Risk Assessment is documented.

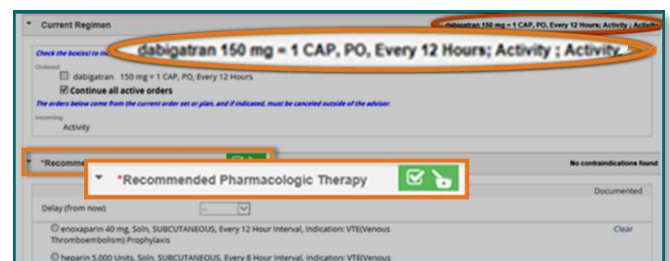

NOTE: Aspirin previously created this conflict but has been addressed.

Prophylaxis Already Ordered

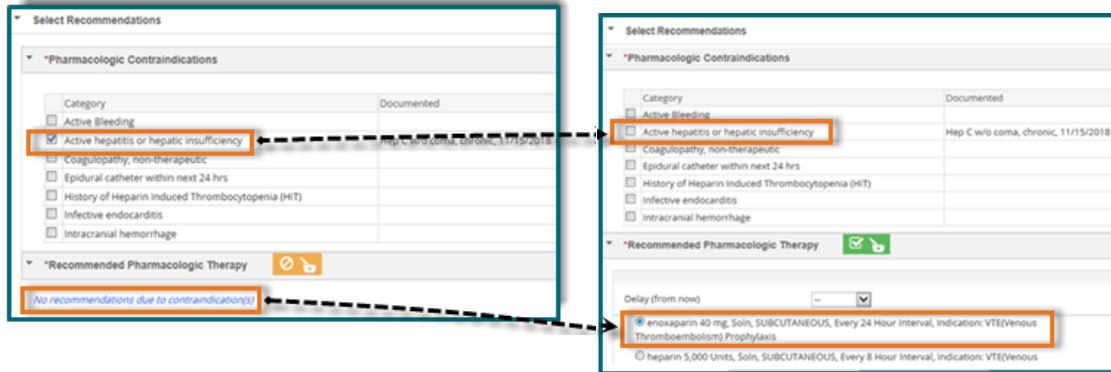

If current regimen fulfills advisor recommendations,

- **Example: DOAC at home**
 - The Recommended Pharmacologic Therapy icon will be green/satisfied at the top of the advisor and Recommended Pharmacologic Therapy section.
 - No further prophylaxis is needed, but a risk level will still need to be documented.
 - Additional prophylaxis options are also available to be ordered if you choose to change therapy.

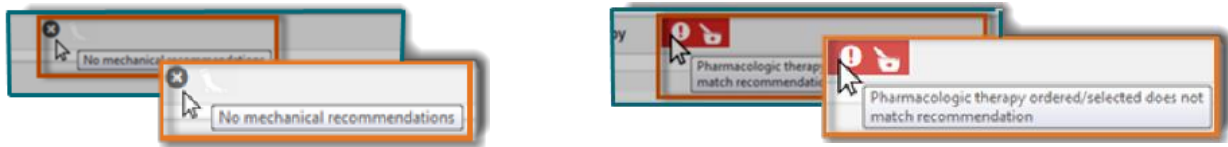

Disagree with Contraindication

If you disagree with a contraindication to prophylaxis and want to order therapy, you have the ability to deselect the contraindication. Deselecting will allow you to choose a therapy.

Hovering Over Icons & Icon Descriptions

- You can hover over any icon in the advisor to find more information.

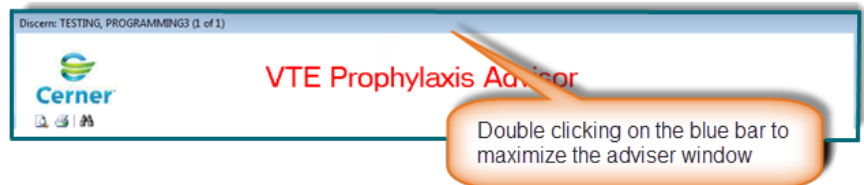

- Here is a list of all icons and descriptions:

Icon	Description	Icon	Description
	Pharmacologic Therapy recommended and ordered/selected		Mechanical Therapy recommended and ordered/selected
	Pharmacologic Therapy appropriate, options available		Mechanical Therapy appropriate, options available
	No pharmacologic recommendations		No mechanical recommendations
	Pharmacologic Therapy recommended not ordered/selected		Mechanical Therapy recommended not ordered/selected
	Pharmacologic Therapy ordered/selected does not match recommendation		Mechanical Therapy ordered/selected does not match recommendation
	Pharmacologic Therapy contraindicated		Mechanical Therapy contraindicated

How to Expand the Advisor

- You can double-click the blue bar at the top of the advisor to maximize to full screen.
- Maximizing the window will make it easier to navigate the advisor.

NOTE: The VTE Advisor alert will continue to fire until a risk level is documented.

For questions regarding process and/or policies, please contact your unit's Clinical Educator or Clinical Informaticist. For any other questions please contact the Customer Support Center at: 207-973-7728 or 1-888-827-7728.
