

Addressing Notifications of Errors

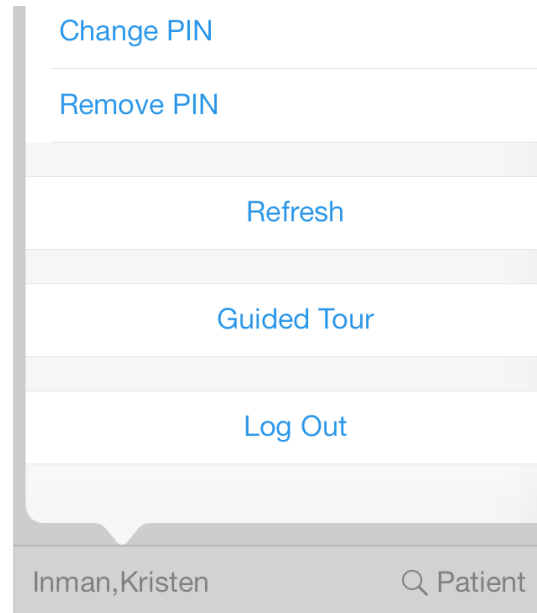

When errors occur in processing information from *PowerChart Touch* into *Cerner Millennium*, a red notification banner is displayed at the top that application detailing the total number of errors.

1. Touch **Errors** to view a list of notifications.
2. To investigate the notification and take action, review the information for the action that resulted in an error.
NOTE: Common causes of errors are connectivity issues, domain downtime, and two users attempting to modify the same data at the same time. If none of these apply, repeat your original action. If the error persists, contact your IT department for further investigation.
3. Once you have addressed an error, remove it from the notification list by tapping **close (X)**.
4. If an orange banner is displayed which reads **Unable to retrieve notifications**, attempt to reconnect to the Wi-Fi network. Notify your IT department if further assistance is necessary.

Logging Out

1. Touch your username in the lower left corner of the application.

2. Touch **Log Out**. The application closes.

PowerChart Touch Overview Providers

Logging In

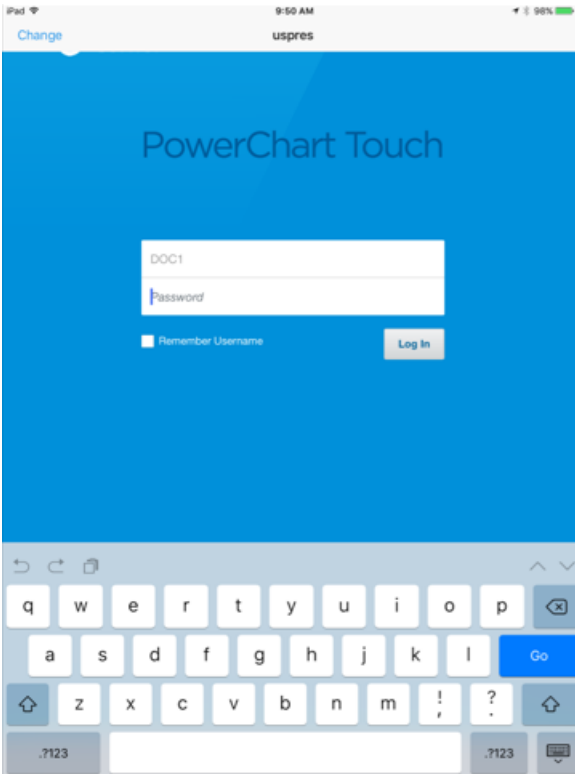

1. Touch the application to open it.
2. Select the domain that you intend to work in.

Location	Edit
