

This flyer contains workflow steps for NL Acadia Hospital Psychiatrists providing care in the Neuromodulation Clinic.

Provider ECT and Ketamine Documentation and Ordering

➤ **BH ECT Procedure Notes**

- A Dynamic Documentation template is used to document both Ketamine Infusions and ECT Procedures.
- Use the **auto texts**, noted below, to quickly document the procedure details.
- On the **Clinic Workflow** MPage, select **More** to access the **BH ECT Ketamine Procedure Note** hyperlink.

REMINDER: [Tagging](#) is a tool that can be used to pull documentation from a prior note.

➤ **Auto texts**

- Two auto texts are available to add documentation into your note.
 - /ECTProcDetail

Location of ECT Stimulus:

Settings: Pulse Width Frequency Duration Amplitude

Time Procedure Started:

Energy Dynamic Impedance Charge

- /KetamineProcDetail

Modality of Ketamine delivery:

Dosing: (mg/kg of ideal body weight)

Time Procedure Started:

Infusion Time:

Description of Procedure including Nursing Interventions:

➤ **OP Electroconvulsive Therapy ECT and OP Ketamine Treatment PowerPlans**

- In the ordering catalogue, select the **appropriate PowerPlan** for the treatment modality.

- Each PowerPlan contains two phases: Pre Op Phase and a Post Op phase. Each phase can be initiated individually as the patient progresses through their appointment.

NOTE: If the patient will be returning to an inpatient setting, uncheck the discharge order in the plans Post Op Phase.

- If placing the PowerPlan the day before, use the following steps:

STEP 1: Select the desired orders from the PowerPlan.

STEP 2: Select **Plan for Later** in the bottom right.

STEP 3: Select **Sign**.

NOTE: There is a pre-selected Communication Order that allows nursing to initiate this PowerPlan upon patient arrival.

➤ **Copy Forward Functionality**

- Use the **Copy Forward** button to “pull forward” the last used PowerPlan for the patient.
 - **Copy Forward** is a useful tool for series patients to automatically fill in the PowerPlan as it was the last time the patient was seen.

NOTE: When using the Copy Forward feature on the OP Ketamine Treatment plan, only the Mg/Kg of the IV Ketamine Dose copies forward. Open the dose calculator to further review/apply the final dose.

STEP 1: Select **Orders** from the Menu.

STEP 2: Select **+ Add** in the top left.

STEP 3: In the **Add Order** window, select the **Copy Forward** icon. 

STEP 4: Select the appropriate PowerPlan from the list below.

NOTE: All PowerPlans display the date reflecting the last time the PowerPlan was used.

➤ **Signing an Anesthesia Record**

- ECT documentation done by the CRNAs is documented electronically within the Anesthesia record. This requires the ECT Provider sign their record.

STEP 1: The CRNA will have the Anesthesia record open to the signature field.

STEP 2: Enter Cerner credentials and select **OK**.

NOTE: Any time the CRNA needs to unfinalize a record to make additions or corrections, the Anesthesia record will need to be signed again.

➤ **CRNA Preassessment and Postprocedure Documentation**

- CRNAs use PowerNotes to document pre and post procedure assessments and is forwarded to Message Center for cosignature.
